

Project Background

Involved multi-district/ **multi-jurisdiction patent litigations** and another **simultaneous IP litigation** concerning proprietary product. Review set to collect and produce relevant documents related to ABC[®] for both the litigations.

Challenges

- ⦿ Dual litigation required review of materials from overlapping custodial collections amounting to millions of documents requiring **parallel rolling production of responsive documents** and preparation of **corresponding privilege logs**
- ⦿ High stakes involved due to **large volume** (15 TB) and **limited time** to process it with required quality
- ⦿ Client incurring high costs, relying almost purely on services from outside counsel

IDS Solution

Workflow

- ⦿ Designed a **scalable workflow** and team structure
- ⦿ Quality ensured by adhering to **stream lined quality process** including 100% QC, search based sample QC, Missed Privilege Review and QA

Team

- ⦿ **Law graduates** selected using Client's selection process
- ⦿ Trained by client's counsel
- ⦿ **Retained same team** for the project duration

Costs

- ⦿ Used the **review tool (Autonomy)** feature by considering the unique properties of documents to **return the most relevant information first**
- ⦿ **Removed duplicates** and **highlighted key search terms**
- ⦿ Removing duplicates significantly **reduced e-Discovery processing costs** for EDD processing, legal coding and scanning projects

Secured Facility

- ⦿ **Secured and separate facility** for review with restrictions on use of mobile phones, cameras etc.
- ⦿ To ensure confidentiality each and every team member signed **NDA with the client**
